Joseph Kirchner

Solutions & Implementation Architect · Brooklyn, NY · joekirchner.com · linkedin.com/in/joekirchner

SUMMARY

Solutions and implementation architect with 13+ years taking workflow systems from discovery to production in regulated public-sector environments. Helped scale a SaaS + managed services platform from a single state to 17 states and 600+ managed endpoints, integrating with 20+ court case-management systems. Translates ambiguous customer requirements into technical designs, integration plans, rollout processes, and steady-state operations.

SKILLS & EXPERTISE

Architecture & Delivery: Solution Architecture; Implementation Architecture; Technical Discovery; Requirements Gathering; Workflow Design; Systems Integration; Implementation Planning; Deployment Strategy; Adoption & Enablement

DevOps & Operations: Release Management; Deployment Planning; Configuration Management; Patch Management; Monitoring; Incident Response; Root-Cause Analysis; Operational Readiness; QA & Validation; SOPs & Runbooks

Cybersecurity: Device Hardening; Security Patch Management

Technical: Linux; Windows; DigitalOcean; Docker; Ansible; Cron / Scheduled Jobs; REST APIs; SQL (querying); GitHub; Jira; CMS Platforms

Domain: GovTech; Courts & Municipalities; Case-Management Integrations; Interactive Kiosks; Digital Signage; Visitor Management

EXPERIENCE

AdGators | Co-Founder — Springfield, IL (Remote/Hybrid)

SaaS + managed services for digital signage, kiosks, and visitor workflows in courts and municipalities.

Chief Information Officer — 2019 – 2025

- Led day-to-day delivery and technical operations within a five-person company, owning implementations from kickoff through go-live and coordinating sales, development, and support
- Drove technical discovery and supported pre-sales through solution scoping, RFP contributions, demos, and pilots as the platform expanded from 1 state to 17 states
- Translated court rules and operational workflows into automated visitor check-in, docket display, and information-delivery systems for courts and municipalities
- Directed solution design for 20+ case-management integrations, including Tyler Technologies, Equivant CourtView, Journal Technologies, and Thomson Reuters, connecting vendor APIs, legacy databases, and scheduled exports to court-specific workflows
- Architected the deployment and operating model for 600+ distributed kiosks and signage endpoints, using standard Linux configurations, Ansible automation, monitoring, incident response, and release management
- Built rollout playbooks, training, documentation, and escalation paths that sustained near-total customer retention
- Directed the two-year migration to the proprietary Screenseed platform on DigitalOcean with Docker, eliminating a significant recurring software cost

Technical Architect 2015 – 2019

- Served as the primary implementation lead after project kickoff for 3–7 concurrent court deployments, managing work through go-live and customer acceptance while resolving cross-functional and third-party blockers
- Ran implementation discovery and rollout planning with court and municipal stakeholders, defining success criteria, workflow requirements, integration dependencies, deployment sequencing, and project cadence
- Translated customer and product requirements into solution architecture with a third-party development team to build DocketVision, the company's first SaaS platform for digital signage and interactive court kiosks
- Balanced new deployments each year with ongoing support across a growing installed base
- Built and maintained a centralized knowledge base of runbooks, deployment checklists, troubleshooting guidance, and escalation paths to improve onboarding and support handoffs

IT Specialist 2012 – 2015

- Piloted the company's first digital docket solution, establishing the foundation for later enterprise deployments
- Built the first version of Screenseed OS, a custom Linux image configured to integrate with the Screenseed player, and established standardized imaging and patching practices that later scaled to 600+ endpoints
- Migrated the device fleet from Windows to Linux, lowering licensing costs while improving security posture and upgrade consistency
- Implemented an open-source CMS that substantially reduced licensing and technology costs

ADDITIONAL EXPERIENCE

Participant Technical Support Specialist, Illinois State Treasurer 2009 – 2012

Information Technology Support Associate, SIU Support Center 2007 – 2008

EDUCATION

Southern Illinois University, Carbondale, IL — B.S. Information Systems Technologies 2008
